Health conditions of infants in India

531. SHRI VIRENDRA KATARIA: Will the Minister of HEALTH AND FAMILY WELFARE be pleased to state:

(a) whether, according to a United Nations Report, most of the newly-born infants in India are underweight due to malnutrition inherited from undernourished mothers which is a major contributory factor in the deaths of children upto the age of five years;

(b) whether Government are planning to formulate any comprehensive scheme to ensure healthy growth of children in the country;

(c) if so, the details thereof; and

(d) if not, the reasons therefor?

THE MINISTER OF HEALTH AND FAMILY WELFARE (SHRI A.R. ANTULAY): (a) The United Nations publication "State of the World's Children 1995" indicates that 33% of the infants born in India in 1990 were low birth weight. Maternal malnutrition contributes to the incidence of low birth weight.

(b) to (d) Pre-school children and expectant and nursing mothers are being provided nutritional supplementation through interventions under the Integrated Child Development Services (ICDS) Schemes. The Child Survival and Safe Motherhood Programme is directed at the major causes of morbidity and mortality in young children. Nutrition Education and Extension activities contribute to preventing malnutrition in mothers and children.
